

We know why science is important in everyday life

We are curious scientists: we ask lots of questions

We plan and carry out our own investigations to find answers

We use scientific words correctly and confidently

We enjoy learning outside

Our Vision for Science at Stokenchurch

We plan lessons that build on previous knowledge and experiences through the use of questioning, observations and informal assessments

We carefully teach and encourage the use of correct scientific vocabulary (including spelling)

We promote children's curiosity: we expect them to ask questions about their learning and about the unknown and unexpected

To make learning real, memorable and relevant, we offer a wide range of scientific experiences e.g. practical investigations, visitors, trips, curriculum days

We plan and teach lessons which are hands-on, practical and investigative so children develop the full range of enquiry skills

Our Principles for Science at Stokenchurch
